# DIGITAL LITERACY PROJECT REPORT

---

**Course Code**: CSE0001
**Course Title**: Digital Literacy

---

**Submitted By:** Parth Gabale
Registration Number: 25BCE10101
Branch: B.Tech CSE core
Year: First Year

---

**Institution:**
VIT Bhopal University

## 1)INTRODUCTION

The project is about literacy. Digital literacy is very important in todays world because everything is on the internet. As a student of the Digital Ambassadors program I want to tell students how important digital literacy is. I want to do this in a way that's safe and responsible.

The project has activities that need students to know about digital literacy. Students need to know how to be professional how to use the internet safely. They need to know how to talk to people in a nice way and how to avoid bad people on the internet.

From this project I have learned how to use digital tools like Canva and GitHub and LinkedIn. I also learned how to use Google Forms and how to write code. This project has taught me that communication and safety are very important when we are online. I have learned that digital literacy is very important for students, like me. Digital literacy helps us to be safe and smart when we are using the internet. The Digital Ambassadors program and this project have really helped me to understand the importance of literacy.

## 2) TASK 1

For this task I made an infographic about literacy awareness using Canva. I wanted the infographic to explain literacy concepts in a way that students could understand easily.

The infographic has four parts: what digital literacy is, how to use the internet safely digital tools and being professional online. I kept the design simple and nice to look at.

The best part of the task was figuring out how to put all the information in the space I had. The hardest part was making sure the design and the information worked well together so it did not look too busy.

Doing this task taught me how important digital literacy is and how I can use Canva to show it in a way. I learned a lot, about literacy and I think it is really useful for students to know about digital literacy.

## 3) TASK 2

For Task 2 I had to make profiles on GitHub, LinkedIn and Kaggle. These GitHub, LinkedIn and Kaggle profiles will help me build a presence online.

* GitHub is a website where developers share their coding projects so that other people can see what they can do

This helps me show off my coding skills to everyone.

I made a profile on GitHub so I can share my coding projects with people.

LinkedIn is a website for professionals to connect with each other.

I added my education details on LinkedIn so that people can know about my background.

This helps me connect with people who have a background as me.

Kaggle is a website where I can practice problems and get better at data analysis.

I can practice data science and machine learning problems on Kaggle. Compete with other people.

I now understand how important it is to have a presence on GitHub, LinkedIn and Kaggle.

Over the four years I plan to update my GitHub profile with new coding projects.

I also plan to build a network of people on LinkedIn.

Additionally I want to improve my skills using Kaggle.

This Task 2 helped me start building my presence on GitHub, LinkedIn and Kaggle.

It will be helpful for me, in the future when I apply for internships and other job opportunities.

## 4)TASK 3

For Task 3 I used a coding practice platform and a cloud-based collaboration tool. I made a Digital Literacy Awareness Quiz using Google Forms. The Digital Literacy Awareness Quiz had five questions about literacy like being safe on the internet, passwords and suspicious emails.

I had choice and short answer questions in the Digital Literacy Awareness Quiz, which helped me learn how to make quizzes that're fun and interactive. The Digital Literacy Awareness Quiz was connected to a Google Sheet, which helped me learn how to organize the answers I got from the Digital Literacy Awareness Quiz and use the information in a way that makes sense.

I also learned how to use a platform to make and use content for my school work. This was really helpful because now I know how to use this platform for my school work and other tasks. Doing Task 3 helped me learn how to ask

questions and get feedback from people who took the Digital Literacy Awareness Quiz.

The tools I used for Task 3 like the Digital Literacy Awareness Quiz and Google Forms are really great, for my school work. I can use these tools to ask people questions organize the answers I get from the Digital Literacy Awareness Quiz and work well with my team. Doing Task 3 helped me get better at using these tools like the Digital Literacy Awareness Quiz. I can use them again for my school work.

## 5)TASK 4

When a student emails their professor they should do it the way. A bad example is when a student sends an email to their professor without saying hello or explaining what they want.

The student might just write "Send marks" to their professor in the email.

This is not how you talk to professors. The student needs to say what they mean by "Send marks". They need to say what they are asking for. Why they need it.

To make this better students should be nice and clear when they email their professors. Students should always say hello. Start with a greeting in their email to their professor. Then they should explain what they are asking for in a way.

This way students and professors can understand each other. Have a good relationship.

The student should write an email to their professor, not just a few words, like "Send marks".

This will help the professor know what the student needs and the professor can respond in a way.

## 6)TASK 5

I was looking into phishing and online fraud. What really got me is how easy it is for bad people to make messages and websites that look real. I found out that making mistakes like clicking on a link without checking where it comes from can have effects like losing my money or having my identity stolen.

This project has taught me to be more careful when I am on the internet. One thing I am going to do is think before I click on any links or give out my information. I will also make sure to check if emails and websites are real before I use them. I have learned that cybersecurity is very important when I am on the internet. Phishing and online fraud are problems and I need to know about phishing and online fraud. From on I will be more careful, with phishing and online fraud.

## 7)conclusion –

This project helped me learn a lot about literacy and why it is important today.

I did tasks that taught me how to use digital technology correctly.

I learned to create an online presence and communicate well using digital tools.

The project also taught me about safety and cyber crimes like phishing.

I used platforms like GitHub, LinkedIn and Google Forms to improve my skills.

These skills will be helpful in my studies and career.

The project made me more confident in using technology.

I now feel more comfortable using tools.

Digital literacy is really important. I am glad I learned about it.

The tasks in the project were very useful.I learned to be safe and use digital technology properly. GitHub, LinkedIn and Google Forms helped me a lot. I will use

these skills for a time. This project was very helpful for me. It taught me new things, about digital technology I am happy I did this project.

It helped me gain knowledge and confidence.
